

MGA Celebrates 50 Years

For 50 years, the AMS secondary journal *Meteorological and Geoastrophysical Abstracts* has served the community of researchers and students in meteorology and the related sciences by publishing the abstracts of thousands of articles each year from hundreds of primary literature sources. Produced for AMS by Inforonics, MGA has, in recent years, been available on CD-ROM and via the Web in addition to print, providing an efficient mechanism for searching the literature. If you have never used MGA, or not used it recently, please stop by the MGA booth in the Book, CD-ROM, and Online Publications Exhibit and see what this research tool can do. The database is available from any terminal at the meeting at <http://www.mganet.org>.
